

Shopping Hut

1. Description

Shopping hut is a web application for online shopping. It will enable the customers to buy large variety of products in reasonable amount of time. It will enable the users to get access to different sale items and to order the products of their choice without any need to visit the market. Registration of users is required for utilizing different sale options. It will allow registered users to order different items and to purchase the products. Once the order is placed the customer information will be checked for verification and then order will be placed. Customers can make payment through cash. The admin of the system will keep record of all the items that are available for sale and the items whose order has been placed and the products that have been sold. The admin can also add or remove a sale item.

2. Goals

The goals of the application are:

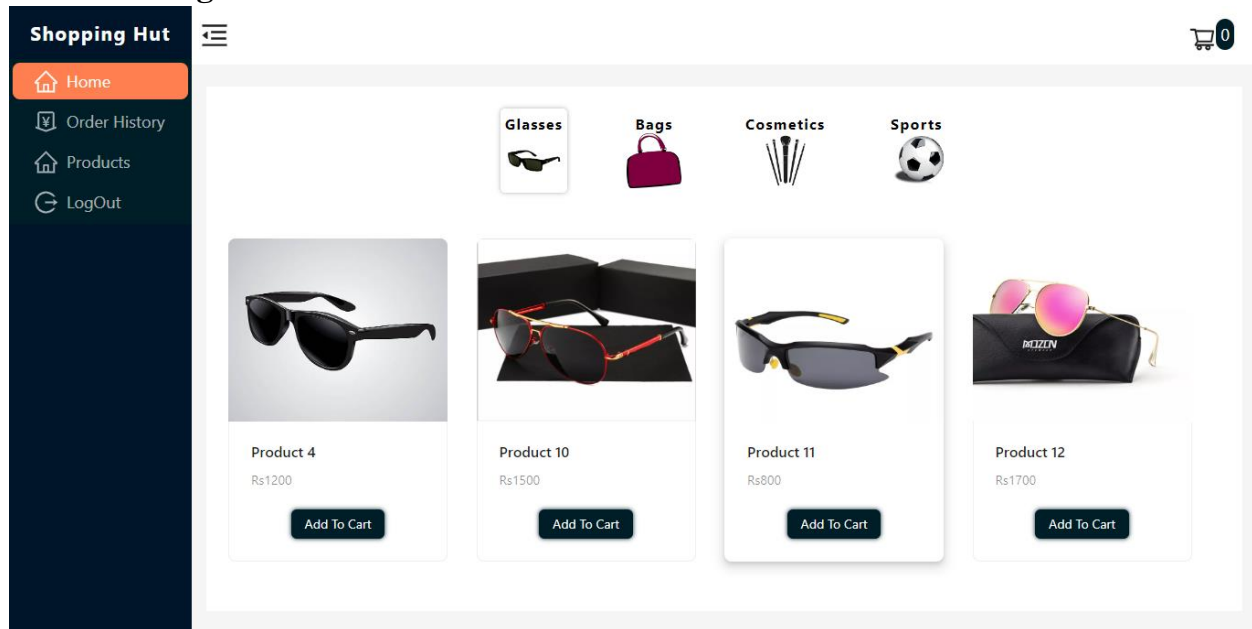

- To enable the customers to buy large variety of products in reasonable amount of time
- without the need to visit stores.
- To extend the business by selling the products to large number of customers.
- To provide variety of products to the customers.
- To provide flexible ordering options for the ease of users.
- To ensure customer satisfaction through better service.
- To keep customer information safe and secure.
